Exemption from declaration

To the maximum extent permitted by law, the devices described in this manual (including its hardware, software, firmware, etc. Informal writing) are provided "by the status quo," and may have defects, errors or faults. Tsine Technology does not provide any form of express or implied warranties, including but not limited to the warranties of merchantability, quality satisfaction, fitness for a specific purpose, noninfringement of the rights of third parties, etc. Informal writing ; nor Compensation for any special, incidental, incidental or indirect damages caused by the use of this manual or the use of our devices.

Before using this device, please read this user manual and relevant technical documents published on the Internet in detail and understand relevant information to ensure the manipulator is used on the premise of fully understanding the manipulator and its related knowledge. Tsine Technology recommends that you use this manual under the guidance of professionals. All safety information contained in this manual shall not be regarded as the guarantee of Mirobot. Even if the manual and relevant instructions are followed, the hazards or losses caused in the use process may still occur.

It is the responsibility of the users of this device to ensure that the applicable laws and regulations of the relevant countries are followed and that there are no significant risks in the use of Tsine Technology manipulator.

Beijing Tsine Technology Co., Ltd

Preface

Objective

This manual introduces the functions, technical specifications, installation instructions, system debugging, etc. Informal writing of the Mirobot manipulator, which is convenient users understand and use the Mirobot manipulator.

Readers

This manual applies to:

- ◆ Educational Engineer
- ◆ Sales Engineer
- ◆ Installation and commissioning engineer
- ◆ Technical support engineer

Revised records

Symbolic conventions

The following symbols may appear in this manual, and their meanings are as follows.

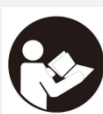

Symbol	Explain
	Indicates a high potential hazard which, if not avoided, could result in personnel death or severe injury.
	Indicates a moderate or low potential hazard, if not avoided, may cause slight personal injury, manipulator damage.
	This indicates that there is a potential risk, which may lead to arm damage, data loss ,or unpredictable results.
	Representation is the additional information of the text and the emphasis and supplement to the manual.

1 Introduction of WLKATA Mirobot

WLKATA Mirobot is a six-axis mini industrial robot arm manipulator and is independently developed and launched by Beijing Tsineu Technologies Co., Ltd. The WLKATA Mirobot manipulator is primarily developed for STEAM makers, and adolescent education and higher education purpose.

It represents a new generation of lightweight six-axis desktop robot arm model, which integrates a variety of practical functions, such as drawing, handling, stacking, painting, writing and machine vision. Users can easily control Mirobot by remote controller, graphical programming, teaching and play. It has a rich I / O extension interface, which allowed it to connect to diverse end-effectors. For advanced operation, users could adopt Python, C++ and more for subsequent development.

1.1 Structure of WLKATA Mirobot

WLKATA Mirobot is mainly composed by a base, six rotating joints, a lower arm, an upper arm, an end-effector connection plate., as is shown in Figure 1.1. There are a total of six robot joints in Mirobot, please see Figure 1.2 to familiar with the name of each of the six joints. The reference frame is shown in Figure 1.3. For more information of the structure of Mirobot, please refers to **4 Working principle and specification** in this manual.

Figure 1.1 The Structure of WLKATA Mirobot F1

Figure 1.2 The Six Joint Frame Of WLKATA Mirobot F1

Figure 1.3 Reference Frame of WLKATA Mirobot F1

1.2 Items in the WLKATA Mirobot F1 standard set

The WLKATA Mirobot F1 standard set is ready for users who want to experience the essential functions of the Mirobot. There are 10 items in the standard set package, including the Mirobot manipulator, User Manual (paper-based simplified version), Bluetooth Box, Extender Box, IDC Cable, Gripper Module, Pen Holding, Power Supply, USB Cable and Hex Screwdrivers. As shown in Figure 1.4.

Figure 1.4 Items in the WLKATA Mirobot F1 standard set

1.3 Add-ons and accessories

A rich range of add-ons are available for the WLKATA Mirobot. Please refers to the following table to check the name and function of the add-ons. As shown in Figure 1.5.

11	Robot Controller	
12	Robot Controller USB Cable	

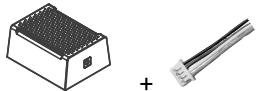

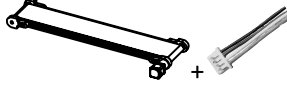

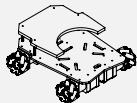

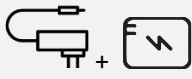

13	Low Power Pneumatic Unit	
14	Suction Cup	
15	2-Finger Gripper	
16	High Power Pneumatic Unit	
17	Universal Ball Gripper	
18	GoPro (Hero7) Carrier	
19	Sliding Rail	
20	Conveyor Belt	
21	Robot Arm Vehicle	
22	Robot Arm Vehicle Power Supply and Battery	

Figure 1.5 Add-ons and accessories for the WLKATA Mirobot F1

2 Safety precautions

This chapter introduces the safety precautions when using this device. Please read this manual carefully before using the manipulator for the first time. This device should be used in an environment that meets the below requirements. Do not modify the device without authorization. Otherwise, it may cause device failure, even personal injury, electric shock, fire, etc. The installation, operation, teaching, programming, and system development personnel of the manipulator must first read the manual carefully and use the manipulator in strict accordance with the specifications of the manual.

2.1 General Safety

DO NOT Change or Modify the Circuit or Wire.

The manipulator is an electrical equipment. Nonprofessionals are not allowed to change or modify the circuit or wire. Otherwise, it is easy to cause injury to the equipment or person.

When using the manipulator, the following safety rules shall be followed:

- ◆ The "DANGER," "WARNING," and "NOTICE" described in the manual are only used as supplementary instructions for all safety precautions.
- ◆ Please use the manipulator within the specified environment. If the manipulator is used beyond the specification and load conditions, the device lifetime will be shortened and even cause damages to the equipment.
- ◆ The personnel responsible for the installation, operation and maintenance of the WLKATA Mirobot manipulator must firstly receive training, and understand various safety precautions, and master the correct operation and maintenance methods before operating and maintaining the manipulator.
- ◆ It is not suggested to repair the faulty parts or dismantle the manipulator without professional training. If the devices fail, please contact the WLKATA Mirobot technical support engineer for advices.
- ◆ The high corrosive cleaning is not suitable for the cleaning of the manipulator, and the anodized parts are not suitable for immersion cleaning.
- ◆ If needs to discard the device, please correctly dispose it as industrial waste in accordance with relevant laws to protect the environment.
- ◆ There are small parts in the packing box. DO NOT let children play with the packing or parts in the box in order to prevent swallowing or hurts.
- ◆ If the manipulator is used by child, at least one adult must be on the side to monitor the child's operation.
- ◆ The equipment shall be shut down when the operation is completed.
- ◆ In the process of manipulator movement, please do not extend your hand into the movement range of the manipulator to avoid bumping or pinching.
- ◆ It is strictly prohibited to change or remove and modify the nameplate, description, icon, and mark of the manipulator and related equipment.

- ◆ During the handling and installation, please pay attention to handle with care according to the instructions. Otherwise, it is easy to damage the manipulator.
- ◆ When operating the manipulator, the local laws and regulations shall be strictly observed. The safety precautions described in the manual are only as a supplement to local safety regulations.
- ◆ Before operating the manipulator, please refer to this WLKATA Mirobot User Manual which is downloadable in the WLKATA official website.

2.2 Precautions

I. Lifting and Handling Mirobot Correctly

Always remember to lift and handling Mirobot by holding the Lower Arm with one hand and holding the Base with the other hand. One should not lift or handle Mirobot by holding the Upper Arm, or it would cause a damage to the motor gears of the major joints.

II. Be Careful of Your Finger and Preventing Pinching

When the manipulator is during operation, do not place your fingers in the gap between the upper and lower arms, or the cap between the lower arm and base to prevent pinching.

III. DO NOT Twisting the Joints by Hand!

DO NOT (!) twist the Joint 1 or Joint 3 by hand in any case, since this would lead to a fetal damage to these joints (due to the high reduction gear ratio of these motors). It is only allowed to adjust the joints by using WLKATA studio or proper operation software.

IV. Caution the Hot Surface of Motor & Chip

When Mirobot is powered on, DO NOT (!) touch the surface of joint 6 motor or the chip by hand, as those parts could be very hot during working.

VI. Press the RESET Bottom for a Hardware Emergency Stop

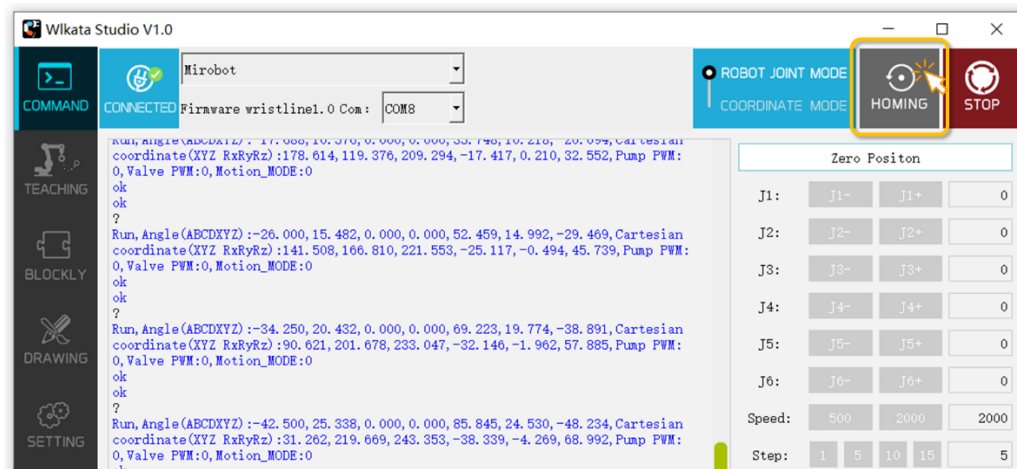

In any case of illegal or abnormal operation of the Mirobot, one should press the RESET button immediately on the top of the Mirobot base for an emergency stop. Then before any further operation, remember to execute the **HOMING** action.

V. Execute HOMING action on Each Time Powering on or re-connect the Mirobot manipulator

Each Time the manipulator is powered on, RESET from an emergency stop, or reopen the WLKATA studio, the user must execute the HOMING action by click the **HOMING** button in WLKATA Studio to homing the joints position. One should wait for the HOMING action to be completed before any further operation. (Please refer to 3.4.2 for detailed instruction).

VII. Unplugging All External Components When Powered Off

When power off the manipulator, please disconnect and unplug all external components from the manipulator, such as Bluetooth box, extender box, color sensor, sliding rail, conveyor belt etc. Otherwise the manipulator and the external components may be damaged.

VIII. Avoid Using This Device for Laser Engraving

This manipulator is not designed for executing laser engraving. For users who use this device in potentially hazardous conditions, one should wear full personnel protection equipment, including glass, glove and use proper protection cover unit, etc.

3 Quick start

This chapter briefly introduces how to control the manipulator by using WLKATA Studio, so that users can quickly understand and use the manipulator. The overall process of operation is shown in Figure 3.1.

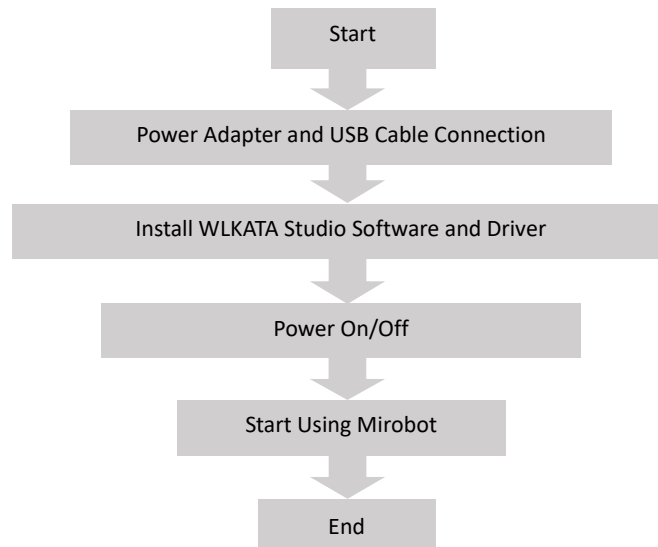

Figure 3.1 The quick start flow chart of using WLKATA Mirobot manipulator

3.1 Power adapter and USB cable connection

(1) Use the supplied USB data cable to connect the WLKATA Mirobot and your computer. As shown in the Figure 3.2

Figure 3.2 Connecting the manipulator to the computer

(2) Connect the supplied power adapter to the manipulator, as shown in Figure 3.3.

Figure 3.3 Connecting the manipulator to the power adapter

3.2 Installing the driver and WLKATA Studio

The users can control the Mirobot by using WLKATA Studio software to realize functions such as Joint Mode control, Coordinate Mode control, Teaching & Play, Blockly control and Drawing, etc.

3.2.1 System environment requirements

WLKATA Studio control software supports the following operating systems:

- Windows 7 (64 bit), Windows 8 (64 bit), Windows 10 (64 bit)

3.2.2 Downloading WLKATA Studio and the driver packages

Download WLKATA Studio software package and the CH340 driver package from <http://www.wlkata.com/site/download.html>.

3.2.3 Installing and verification the driver

1. Installing driver

Decompress the driver package, and click **SETUP.exe** in the directory to install the CH340 driver. In the pop-up window, click **INSTALL** and the interface shown in Figure 3.5 will pop up after successful installation. Click **OK**.

Figure 3.4 CH340 driver installation wizard interface

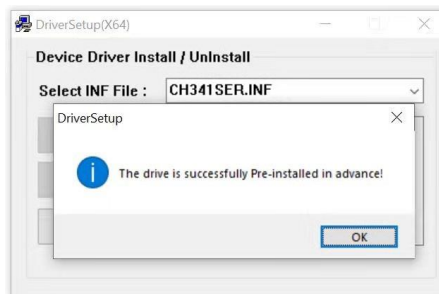

Figure 3.5 Driver installed successfully

2.Verifying the driver

(1) Ensure to connect the manipulator to the computer by using the supplied USB data cable.

(2) Open the **Device Manager** in your PC windows system. Ensure to tick the **Show hidden devices** option in the **View** menu. If the "**USB-serial ch340 (COM4)**" can be found in the **port (COM and LPT)**, it means the driver is installed successfully, as shown in Figure 3.6. The port number following the COM may be different depends on the default driver installation of your system.

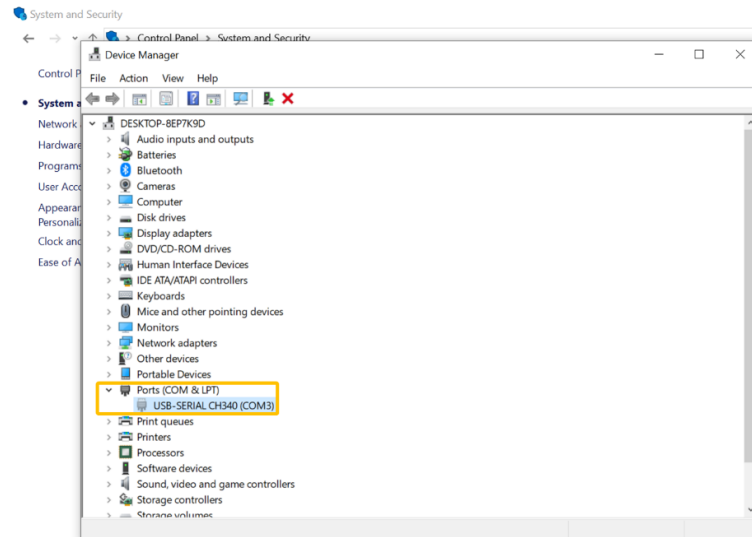

Figure 3.6 Serial port drive information of the WLKATA Mirobot manipulator

3.2.4 Installing and verification of WLKATA Studio

1. Installing WLKATA Studio

WLKATA Studio software package can be directly decompressed and used, as shown in Figure 3.7.

Decompress the WLKATA Studio software package to a **local root directory** such as D:\ or E:\ to avoid potential foreign language character disturb. Double-click **Wlkata Studio.exe** in the directory to open the software user interface. Figure 3.8

Figure 3.7 Opening Wlkata Studio.exe in the local directory

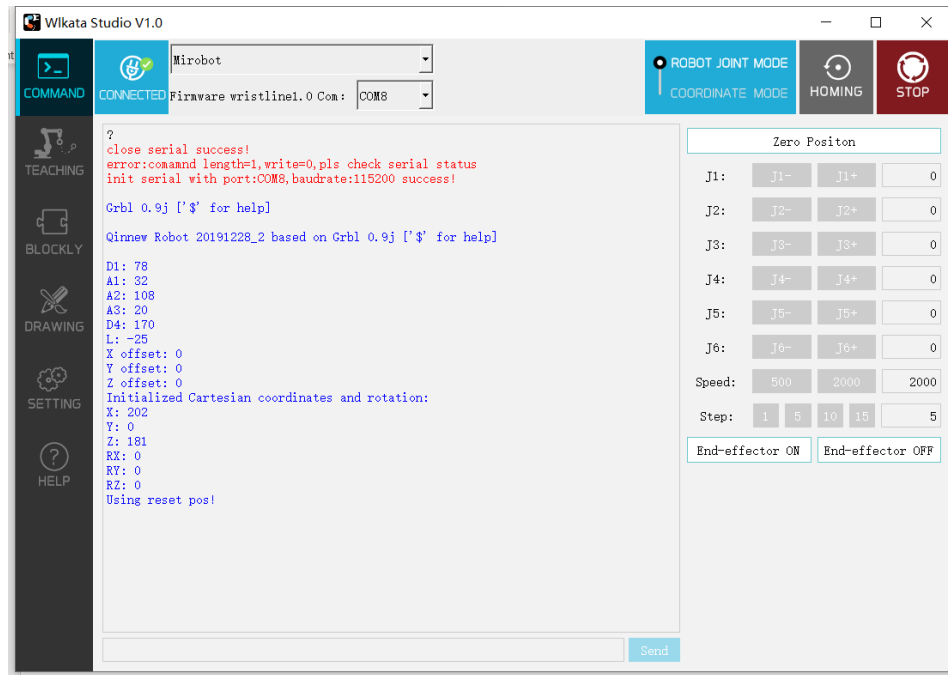

Figure 3.8 WLKATA Studio interface

2.Verifying WLKATA Studio Software

In the decompressed package, double-click to open the **Wlkata studio.exe**. If the Wlkata Studio software can be opened correctly, it means that the WLKATA Studio software is running successfully.

3.Verifying the device connection

(1) Open the **Wlkata Studio.exe**. The software should automatically search and connect to the manipulator after a few seconds. When successfully connects to the manipulator, the upper left corner of the WLKATA Studio interface should display the **CONNECTED** blue icon, as shown in Figure 3.9.

Figure 3.9 WLKATA Studio can search and connect to the manipulator automatically

(2) If the software did not connect to the manipulator automatically, please manually connect the manipulator by choosing the correct serial port COM_ number (as found in the step (2) in the content of [2.Verifying the driver](#)) in the upper second drop-down list, as shown in Figure 3.10.

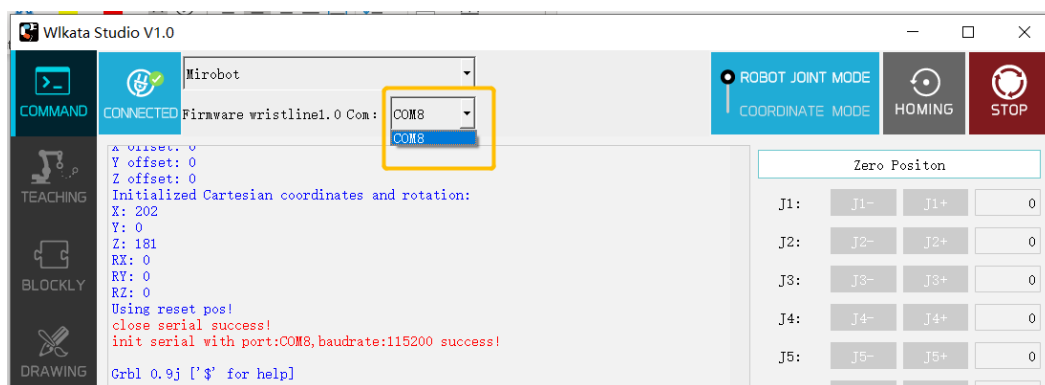

Figure 3.10 Manually setting a serial port number in the upper second drop-down list if the manipulator is not connected automatically

3.3 Powering on and off WLKATA Mirobot

DO NOT Twisting the Joint 1 or Joint 3 by Hand No Matter the Manipulator Is Powered On or Off!

Since this would lead to a fetal damage to the gears of these joints. (See the 2.2 Precautions in this manual)

Power on:

Ensure to connect the manipulator with supplied power adapter. Press the **ON/OFF** power button on the top of the manipulator base to power on the device. The green power indicator on the ON/OFF button will light up, as shown in Figure 3.11.

Figure 3.11 Switching on the manipulator

Power off:

Press the power button on the top of the base of the manipulator again to switch off the power. The power indicator light on the button will turned off.

3.4 Start using the manipulator

This chapter describes the essential control operation of this manipulator by using the WLKATA Studio software.

3.4.1 Prerequisite

- The driver and WLKATA Studio software have been installed successfully. For details, please refer to the 3.2 Installing the driver and WLKATA Studio software.
- The manipulator has been correctly connected to the computer, and the power supply

of the manipulator has been turned on. Please refer to 3.3 Powering on and off WLKATA Mirobot for detailed operation.

3.4.2 Preparing operation steps

1. Connecting WLKATA studio with the manipulator

Double click the **Wlkata Studio.exe** in the directory, and the Mirobot Studio interface should pop up. Then please follow the steps of 3.2.4 to verify the driver and connection. When the connection is succeeded, the CONNECTED blue icon should be displayed in the upper left corner of the WLKATA Studio interface.

2. HOMING the manipulator before any operation

Before any operation, the manipulator must be homed to the pre-designed homing position. Click the **HOMING** button in the WLKATA Studio, as shown in Figure 3.12. Wait for the manipulator to be homed. Figure 3.13 shows the manipulator during the homing process, and figure 3.14 shows the correct position of the manipulator after a successful HOMING action.

* Note: If the HOMING action is failed or interrupted, please reapply the power of manipulator and repeat the HOMING action again.

The manipulator must be HOMING again on each time reapplying power from a power failure or an emergency stop, or re-opened the WLKATA Studio. One should wait for the HOMING action to be fully completed before any further operation.

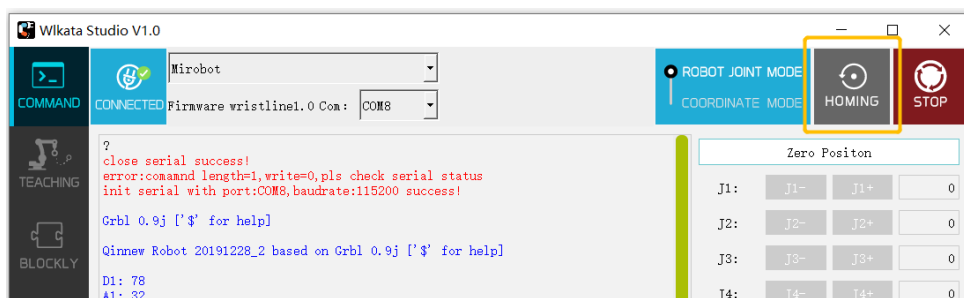

Figure 3.12 Doing the HOMING action each time powering on the manipulator

Figure 3.13 In the progress of HOMING the manipulator

Figure 3.14 The correct manipulator position after a successful HOMING action

3. Software emergency stop and reset

In case of any illegal operation of the manipulator, click the **STOP** button immediately in the Mirobot Studio to trigger a software emergency stop operation, as shown in the Figure 3.15.

After the emergency stop operation, press the **RESET** button on the top of the manipulator base to recover the device from the emergency status, as shown in Figure 3.16.

After press the RESET button, please **HOMING** the manipulator in the software again before continuing using the manipulator.

NOTICE

After a software emergency stop, press RESET on top of the base, and do the HOMING again before continuing using the manipulator.

Figure 3.15 Emergency stop button in the WLKATA Studio

Figure 3.16 Pressing RESET button on the base of the manipulator after a software emergency stop

3.4.3 Using the ROBOT JOINT MODE control function

- (1) Click the COMMAND tab in the software interface, as shown in Figure 3.17.

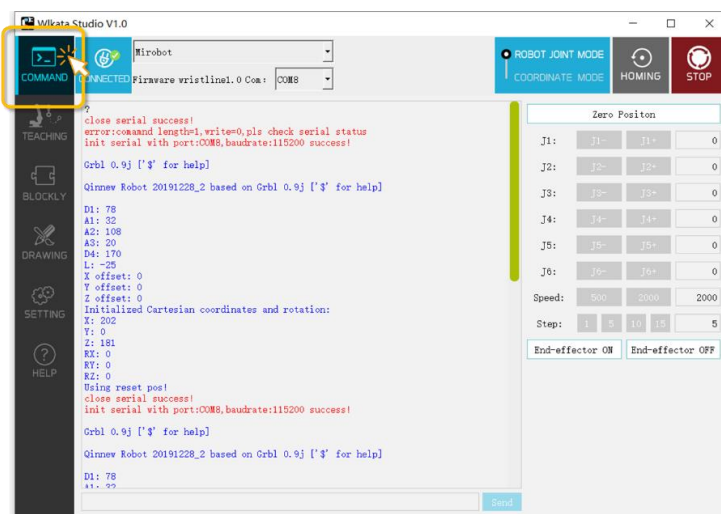

Figure 3.17 COMMAND tab in the WLKATA Studio software

(2) Switch to the ROBOT JOINT MODE in the upper-right control modes selection panel, as shown in Figure 3.18.

Figure 3.18 Selecting the ROBOT JOINT MODE

(3) Click each of the J+ J- control buttons on the right panel to control the motion of each of the six joints of the manipulator separately. The speed can be adjusted by input **Speed** value, and the step can be adjusted by input **Step** value. As shown in Figure 3.19.

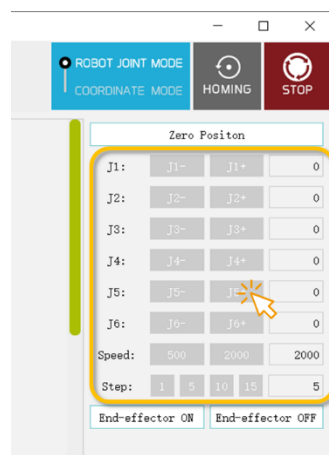

Figure 3.19 The ROBOT JOINT MODE control buttons

3.4.4 Using the COORDINATE MODE control function

(1) Click the COMMAND tab, as shown in Figure 3.17.

(2) Switch to COORDINATE MODE in the control modes selection panel, as shown in Figure 3.20.

Figure 3.20 Selecting the COORDINATE MODE

(3) Click each of the control button on the right panel of the WLKATA Studio to control the spatial position and attitude (XYZ coordinate and RPY angle) of the End-effector of the manipulator. The speed can be adjusted by input **Speed** value, and the step can be adjusted by input **Step** value. As shown in Figure 3.21.

Figure 3.21 The COORDINATE MODE control buttons

3.4.5 Using the TEACHING function

(1) Click the TEACHING tab in the software to switch to the Teaching & Play page, as shown in Figure 3.22.

Figure 3.22 The TEACHING page in the WLKATA Studio software

- (2) Choose one control modes (ROBOT JOINT MODE or COORDINATE MODE) in the control modes selection panel.

DO NOT Change the control mode during the same **TEACHING & PLAY** file/task, or the point data after switching the mode would be discordant and cause illegal motions.

- (3) Click the - + control buttons on the right panel of WLKATA Studio to move the joints (under the ROBOT JOINT MODE) / or the position and attitude of the End-effector (under the COORDINATE MODE) to the wanted position. When adjusted to a satisfactory position point, click the **Add Point** button to add a teaching point, as shown in Figure 3.23.

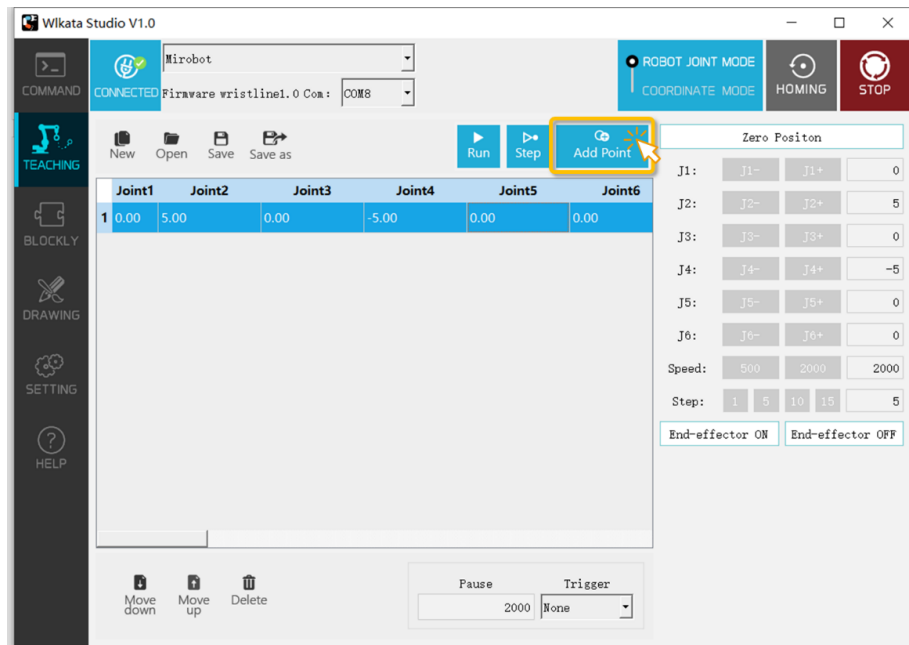

Figure 3.23 Adding the teaching points under the TEACHING page

(4) After adding the first teaching point, one could continue to adjust the position and posture of the manipulator, and then click the **Add Point** button to add the second and the third teaching point... until all teaching points are added.

(5) Edit the property of teaching points:

- Editing the teaching point in-line: single left-click on the top of the cell you want to edit --> input the desired value --> single left-click in blank space / or press Enter to confirm your edit. As shown in Figure 3.24
- Editing the teaching point by the right panel: single right-click on the top of the line you want to edit --> choose **Edit** in the pop-up menu --> adjust the value in the right panel --> move the mouse arrow back to the teaching point line you want to edit and single right-click on the top of the line again --> choose **Update** in the pop-up menu to apply the value on the right panel to the selected teaching point line. As shown in Figure 3.25

Figure 3.24 Editing the teaching point in-line

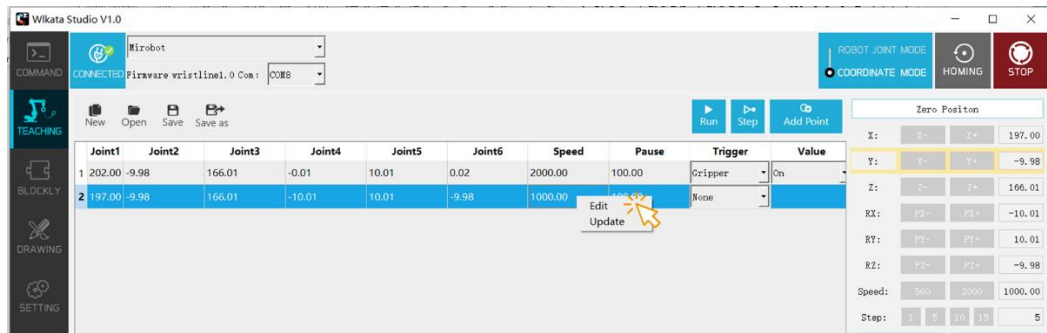

Figure 3.25 Editing the teaching point by the right-side panel

(6) To start a new task, click **New** to clear the current task and start again. To save the current Teaching & Play task, click **Save** and save the task in chosen directory. To open a Teaching & Play file created by WLKATA Studio earlier, click **Open** to lookup the file.

(7) Click **Move down** and **Move up** buttons to change the order of a teaching point line. Click **Delete** button to delete a teaching point line.

(7) Click **Run** button in the panel to realize the whole recurrence of the recorded teaching points in the list. Click the **Step** button in the panel to realize the single-step movement of the recorded teaching point one-by-one in the list. As shown in Figure 3.26.

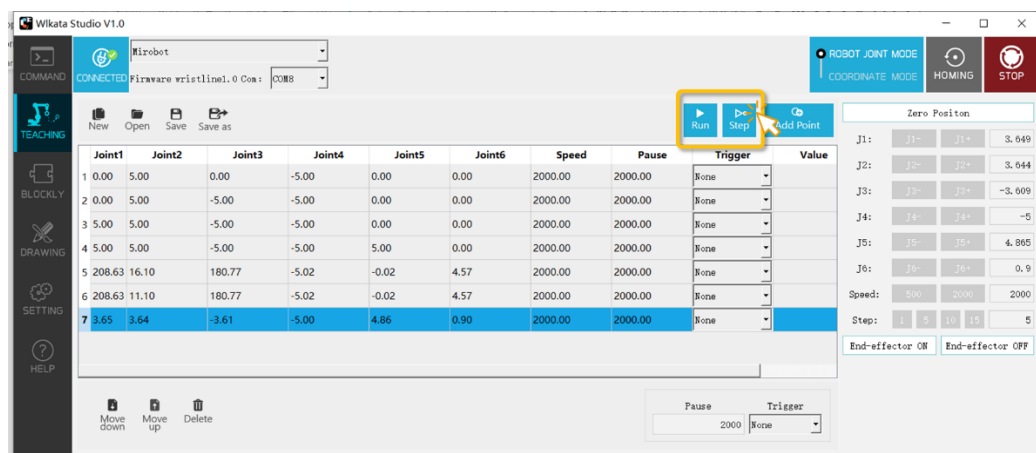

Figure 3.26 The continuous run and single-step run of teaching points in the TEACHING page

3.4.6 Using the BLOCKLY function

Blockly is an open-source graphical programming platform created by Google, which is easily to be learnt and applied by starters.

(1) Click the **BLOCKLY** tab in the software interface to switch to Blockly page.

(2) Drag and drop the Blockly module from the Selection Panel 1 to the Programming Panel 2 to program. The Code Panel 3 would show the python codes of the Blockly module on the Programming Panel, as shown in Figure 3.27.

Figure 3.27 The Blockly graphic programming

(3) To start a new task, click **New** to clear the current task and start again. To save the current Blockly task, click **Save** and save the task in chosen directory. To open a Blockly file created by WLKATA Studio earlier, click **Open** to lookup the file. To delete a module, select the module and click the **Trash** icon.

(4) Click **Run** and the manipulator will move according to the program.

3.4.7 Using the gripper module

The gripper module is an end-effector designed for WLKATA Mirobot. Please follow the instruction in below to install and use the gripper correctly.

Power off the manipulator before installing the gripper module, or it could cause damage to the circuits of gripper or Extender Box.

- (1) **Power off** the manipulator.
- (2) Install the gripper module by screwing it on the end-effector with supplied hex screwdriver, as shown in Figure 3.28.
- (3) Before plug the gripper wire connector into the Extender Box unit, trim off the fix protrusions on the wire connector to allow re-plug-in, as shown in Figure 3.29. Otherwise, the wire connector will be hardly unplugged from the socket.

(4) Plug the gripper wire connector into the **upper-second socket position** on the **Extender Box** unit, as shown in Figure 3.30.

(5) Link the Extender Box with the Mirobot by using the supplied **IDC cable**, as shown in Figure 3.30.

Figure 3.28 Installing the gripper module by a hex screwdriver

Figure 3.29 Trimming off the fix protrusions on the wire connector to allow re-plug-in

Figure 3.30 The method of connecting the gripper with the manipulator

(4) **Control the gripper status (open and close):** The gripper can be controlled under the COMMAND, TEACHING and BLOCKLY functions in the WLKATA Studio:

- In the COMMAND page, control the gripper by click the **End-effect on** and **End-effector off** buttons on the right panel. Figure 3.31
- In the TEACHING page, control the gripper by editing the **Trigger** cell and **Value** cell of the teaching point line. Figure 3.32
- In the BLOCKLY page, control the gripper by drag and edit the **Gripper module** which can be found in the **Motion** panel. Figure 3.33

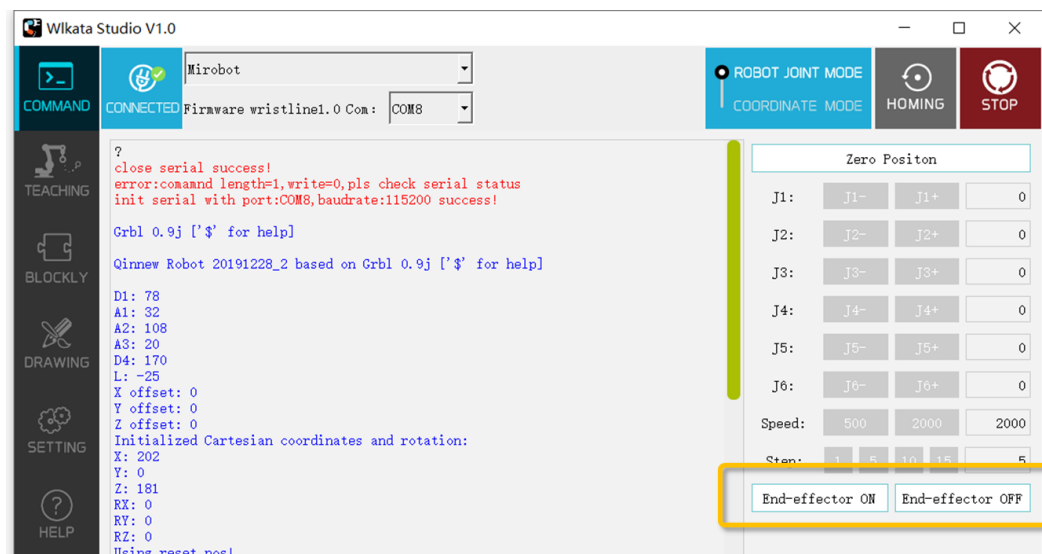

Figure 3.31 Controlling the gripper in the COMMAND function

Figure 3.32 Controlling the gripper in the TEACHING function

Figure 3.33 Controlling the gripper in the BLOCKLY function

(5) When finish using the gripper, **power off** the manipulator, and **unplug** the IDC cable from the back of manipulator.

3.4.8 Using the DRAWING function

Helping Us to Make the Drawing Function Better

The Drawing function of WLKATA Mirobot is still in development. Users may encounter inconvenience during operation. Please provide us your valuable feedback in the Facebook WLKATA fans club or in our website forum. Your supports and our efforts would make the WLKATA Studio better soon.

Preparation before drawing

- (1) Install the pen-holder module and the pen, as shown in Figure 3.34.
- (2) Prepare a **thin soft cushion** and place it under the paper to provide additional buffering during drawing. Figure 3.35

Figure 3.34 Installing the pen-holder module and the pen

Figure 3.35 Placing a thin soft cushion under the paper to provide buffering during drawing

(2) We need to **set the height of the pen first** before drawing. Please follow the below instruction:

- In the WLKATA Studio software, click the **COMMAND** tab in the software interface to switch to the Command page.
- Choose the **COORDINATE MODE** in the control modes selection panel. So that the **Set Pen Height** button is shown in the lower position of right panel.
- Make the manipulator back to the homing position by click **Zero Position** button on the right panel, or click **HOMING**.
- After the manipulator back to the homing position, click the **Z-** button to adjust the height of the pen tip until it just touches the paper, as shown in Figure 3.36.
- The value of **Z** axis shall **between around -20 and 20**. **Be careful not to over-adjust the Z axis position lower than it need to be**, or the pen tip would hit the desktop too hard, interrupt the pen from moving and even cause damages to the joints.
- When the pen tip is just touches the paper, click **Set Pen Height** button to set this pen height for the DRAWING function, as shown in Figure 3.36.

Figure 3.36 Setting the pen height before drawing

Letting the manipulator draw

(7) Click the **DRAWING** tab in the software to switch to the drawing page.

(8) To add a graph from existing files, you can either choose an example from the upper right panel 2 **Examples**, or insert a graph by click **Insert** button. The graph you have chosen should be shown in the center canvas. As show in Figure 3.37.

(9) To add a text graph, typing in the lower right panel 3 and click **Add** button, and the text you have typed should be placed in the center canvas, as shown in Figure 3.37.

(10) To add a mouse drawing graph, click the **Select | Pen** button to switch from the **Select** mode to the **Pen** mode. And then you can use your mouse as a pen to draw on the center canvas, as shown in Figure 3.38.

(11) To adjust the size and position of the graph, ensure the **Select | Pen** button is in the **Select** mode → click the graph in the canvas and a resize frame would appear around the graph. Adjust the corners to resize the graph and drag the inner frame to change the position of the graph. As shown in Figure 3.37.

(12) To delete the unwanted graph on the canvas, ensure the **Select | Pen** button is in the **Select** mode → choose the unwanted graph on the canvas → click **Delete** button.

(13) To start the drawing, click **Run** button, and the manipulator will draw the graph(s) on the canvas. Figure 3.39

(14) To start over from a blank canvas, click **New** button to clear the canvas.

4 Working principle and specification

This chapter describes the working space, working principle, size and key technical specifications of WLKATA Mirobot F1.

4.1 Working space

The workspace of WLKATA Mirobot F1 is shown in Figure 4.1.

Figure 4.1 The workspace of WLKATA Mirobot F1

4.1.1 Coordinate system

WLKATA Mirobot F1 has a six-joint coordinate system and a Cartesian space coordinate system as shown in Figure 4.2 and 4.3, respectively.

Figure 1.2 Six-joint coordinate system Of WLKATA Mirobot F1

Figure 1.3 Reference frame (Cartesian space coordinate system) of WLKATA Mirobot F1

1 Joint coordinate system: the coordinate system determined by reference to each moving joint.

- This manipulator has six joints: j1 j2 J3 J4 J5 J6, all of which are rotary joints. The positive rotation direction of each joint follows the right-hand rule and the thumb points to the opposite direction of the output shaft of each shaft motor.

2 Cartesian coordinate system: The coordinate system is determined by reference to the base of the manipulator.

- The origin of the coordinate system is the center of the base platform.
- The x-axis direction is perpendicular to the fixed base forward.
- The y-axis direction is perpendicular to the fixed base to the left.

4.1.2 Sports function

The motion modes of Mirobot manipulator include Joint motion mode and Coordinate mode.

1 Joint motion mode:

the Joint motion mode means that each joint of the manipulator is controlled separately. You can click the joint motion button to move a single joint.

- Click "J1 +" and "J1 -" to control the positive and negative rotation of the base motor.
- Click "J2 +" and "J2 -" to control the positive and negative rotation of boom motor.
- Click "J3 +" and "J3 -" to control the positive and negative movement of jib motor.
- Click "J4 +" and "J4 -" to control the positive and negative rotation of the fourth axis at the end.
- Click "J5 +" and "J5 -" to control the positive and negative rotation of the fifth axis at the end.
- Click "J6 +" and "J6 -" to control the positive and negative rotation of the sixth axis at the end.

2 Cartesian motion mode:

The Cartesian motion mode of the manipulator controls the position and attitude of the en-effector. You can click the coordinate and RPY angle motion buttons to change the position and attitude of the end actuator.

- Click "x +" and "X -" to control the manipulator to move along the positive and negative direction of the X-axis.
- Click "Y +" and "Y -" to control the manipulator to move along the positive and negative direction of the Y-axis.
- Click "Z +" and "Z -" to control the manipulator to move along the positive and negative direction of the Z-axis.
- Click "PX +" and "PX -" and the end posture of the manipulator rotates along the X-axis.
- Click "py +" and "py -" to rotate the end posture of the manipulator along the Y-axis.
- Click "PZ +" and "PZ -" and the end posture of the manipulator rotates along the Z-axis.

The Cartesian motion mode supports point-to-point motion mode and linear interpolation motion mode. Please refer to the WLKATA Mirobot communication instructions for specific modes information.

4.2 Technical specifications

4.2.1 Technical parameters

Figure 4.1 Parameter specifications

Parameter specification	
Axle number	6+1
Payload	150 g
Repeated positioning accuracy	0.2 mm
Communication Interface	USB / WiFi * / Bluetooth
Power supply voltage	100 V - 240 V, 50 / 60 Hz
Power input	12 V / 5A DC
Power	60W Max
Working environment	- 10 ° C - 60 ° C

Figure 4.2 Axis motion parameters

Axis motion parameters		
Shaft	working range	maximum speed
Axis 1	100 ° to + 100 ° 31 °	31° / s
Axis 2	- 600 ° to + 90 °	65 ° / s
Axis 3	- 180 ° to + 50 °	28° / s
Axis 4	- 180 ° to + 180 °	110° / s

Axis 5	- 180 ° to + 40 °	33° / s
Axis 6	-180 ° to + 180 °	66° / s

Figure 4.3 Physical characteristics

physical characteristics	
Net weight (manipulator and controller)	1.5kg
Round base size	< diameter160mm
Material of manipulator	Aluminum alloy, ABS engineering plastics
Controller	Arduino2560
Robot installation	Desktop
Package specification (L × w × h)	220mm ×160mm ×270mm
The dimension of standard outer box (L × w × h)	300mm x 200mm x 400mm

Figure 4.4 Application software

Application software	
Software	WLKATA Studio, grblcontroller3.6
SDK	Mirobot communication protocol and Mirobot function library
Expandable I / O interface	Step drive interface 1, I / O 4 (configurable as analog signal input (AD) or PWM output)

4.2.2 Technical parameters

The size parameters of WLKATA Mirobot F1 are shown in Figure 4.5, and the installation hole size of its end flange is shown in Figure 4.6.

Figure 3.5 WLKATA Mirobot F1 size parameters

Figure 3.6 The end flange size of WLKATA Mirobot F1

5 Interface description

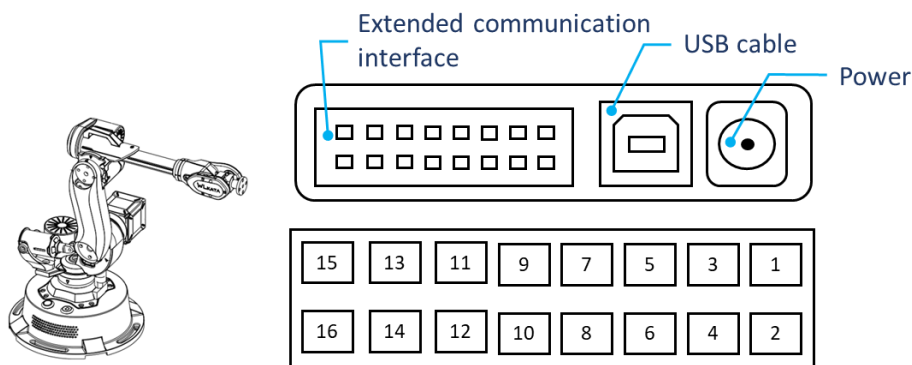

5.1 Interface board of the manipulator

The interface is located at the back of the base of the WLKATA Mirobot F1, and the schematic diagram of the base interface is shown in Figure 5.1.

Figure 5.1 Back interface of substructure

The PIN of the extended communication interface and the definition of each pin is shown in Figure 5.1.

- Ex0 represents the output of pwm1, and EX1 represents the output of pwm2. 1b, 2b, 1a, and 2A refer to the four interfaces of the external sliding rail stepping motor.

15	13	11	9	7	5	3	1
2A	2B	EX0	5V	GND	GND	RX_3	RX_2
16	14	12	10	8	6	4	2
1A	1B	EX1	-	-	-	TX_3	TX_2

Figure 5.1 PIN and Pin definition of back extension communication interface of substructure

5.2 Interface board of the Extender Box

The WLKATA Mirobot external communication interface needs to be connected with the external expansion interface board (the Extender Box) by using an IDC cable. The common external interface board of WLKATA Mirobot and the Pin definition is shown in Figure 5.2.

Figure 4.4 Mirobot general external interface board (Extender Box) and the Pin definition diagram

Appendix I

WLKATA Mirobot Calibration Operation

Calibration Operation Procedure:

The Mirobot is calibrated before leaving the factory. In each time the manipulator finishes the HOMING action, the joint 1, joint 2, joint 3, joint 4 and joint 5 should be homed to the pre-designed homing position, as shown in Figure A1.

After the HOMING action, if one or more of the joints is/are not in the pre-designed homing position, one need to re-calibrate the manipulator. The Calibration procedure is explained as below:

Joint 1 homing position
reference

Joint 2 homing position
reference

Joint 3 homing position
reference

Joint 4 homing position
reference

Joint 5 homing position
reference

Figure A1 Pre-designed homing position of the Joint 1 to Joint 5

- (1) Connect the Mirobot manipulator to the computer with USB cable, and turn on the power supply.
- (2) Open the Wlkata Studio.exe software interface. Ensure the WLKATA Studio shows a **CONNECTED** icon which indicates the manipulator is connected to the software.
- (3) Click **SETTINGS** tab, and the Settings menu would pop-up, as shown in Figure A2.
- (4) Click the **Start** button under the Calibration section, and click **Yes** in the pop-up window to start the calibration, as shown in Figure A3.
- (5) Keep the Settings window open, switch the **COMMOND** page and switch the control mode to **ROBOT JOINT MODE**.
- (6) On the right panel, click the **J+ J-** control buttons to adjust the positions of the J1 to J5 to the pre-designed homing positions (as shown in Figure A1).
- (7) When the Joint 1 to Joint 5 are all in the pre-designed homing positions, click **Finish** button in the Setting window to finish the calibration procedure.

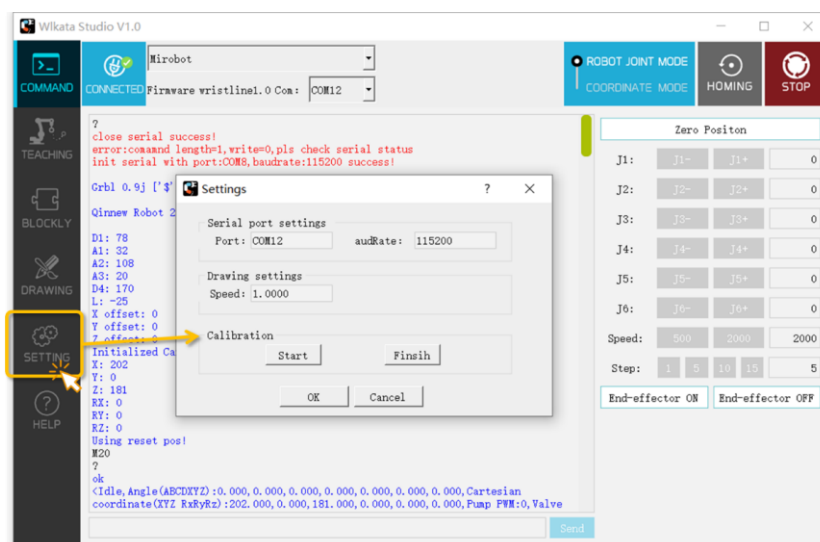

Figure A2 The Calibration in the Settings menu

Figure A3 Start the Calibration procedure

Appendix II

Trouble shooting list of WLKATA Studio

1. Upgrading to a newer version WLKATA Studio

You could find and download the newest version of WLKATA Studio on www.wlkata.com.

Before installing a new version of WLKATA Studio, remember to clear the local record of Wlkata Studio in the AppData directory:

- (1) Go to the directory of `C:\User\ (User Name) \AppData\Local\` , delete the whole folder of Wlkata Studio in this file path.
- (2) Find the old version of Wlkata Studio.exe directory, and delete the whole folder.
- (3) Decompress the new version of WLKATA Studio software package to a **local root directory** such as D:\ or E:\ to avoid potential foreign language character disturb.
- (4) Double-click Wlkata Studio.exe in the directory and start to use the WLKATA Mirobot.
