State-of-the-art control electronics

We use Gecko controls as standard in our SPAs. The very durable, high-end controllers manufactured by the Canadian company offer flexible programming for all operational characteristics, such as control of the filter times, and are specifically designed for long-term operation. With the optional Web Package, you can conveniently control temperature and filter times while on the go from your smartphone and can be automatically reminded when, for example, the filter needs to be cleaned. Voice assistants such as Google or Alexa can also be connected to the web module (currently only if they are used in English). In the event of a problem, our support can simply go online and issue a remote diagnosis.

Crystal-clear water through ozone or salt water disinfection

Small and large particles are continually filtered out using a fine-particle filter. The circulation pump was specially designed for long-term operation with low power consumption. A special feature is that the running time can be individually adapted to one's personal needs. You have the choice between a UV or salt water disinfection system. Even though the UV system is already very efficient, the salt water disinfection system offers pure comfort. Cleaning is fully automatic and natural, without chemical additives.

Extreme insulation saves money

Our multi-stage insulation system ensures that the residual heat is utilised to the greatest possible extent. 40mm-thick insulation with an aluminium layer on the outer walls and on the base, in combination with the 8cm-thick insulated hardcover, ensures that heat cannot be released into the outside air. In addition, the waste heat is reused to heat the water while the pump is running. This saves you money by heating the pool, not the surrounding area. We use a solid aluminium construction with a closed base plate as the support frame for all pools.

1 — Our jacuzzis have a closed base plate made of GRP with an aluminium frame built on them. It doesn't get any more solid and durable than that.

2 — The Gecko control system offers significantly more than other systems on the market. At just a touch of the finger, you can programme filter times and lighting scenarios in combination with many other options.

3 — The multilayer tub construction consists of glued acrylic, vinyl resin, and an anti-bacterial coating and is therefore extremely stable and durable.

4 — The specially reinforced base plate has 40mm of insulation and ensures that you can still enjoy your SPA even years down the line.

5 — DDue to the closed construction method, the front panel is permanently connected to the frame and ensures high stability.

6 — A sound-absorbing fibre is used for sound insulation. This keeps the noise to a minimum.

Plug & play

The Basic Series is our low-budget series. Here, the SPA is reduced to the absolute essentials. Because this version of the SPA is only produced in large quantities, without additional acrylic colours, we are able to offer you this product at an incredibly attractive price. The SPAs in the Basic Series are equipped with a robust and easy-to-use control panel. Temperature and filter cycles can be program-

med as required. The pump and the coloured underwater lighting can each be controlled at the push of a button. The high-end controller that goes with it, manufactured by the Canadian company Gecko, is durable and very robust. To start: simply plug into a 220V socket. No complex electrical installation required.

E(Eco) / P (Pro)

All SPAs i are equipped as standard with an easy-to-use colour display with intuitive user controls. The high-resolution display gives the SPA user ultimate ease of use.All features are self-explanatory, and operation is incredibly easy thanks to pre-set programmes (not at home, beginners, energy saving, super energy-saving mode and weekends). Of course, all programmes can be tailored to individual usage behaviour.

All additional features, such as control of a salt water disinfection system or a heat pump, can also be practically operated via the control panel. The high-end controller, manufactured by the Canadian company Gecko, is durable and very robust. Depending on the model, it can be operated via 1,2 or 3-phase (380V)

Ambient lighting

Our Innovation Series offers you a wide range of illuminated elements that make bathing in the SPA a real pleasure, especially at night. Starting with the coloured lighting for the water, for all valves, controls and (if present) the waterfall, additional small LEDs are located below the headrests, in the filter area and in the outside corners of your jacuzzi. An ambience made for relaxing and dreaming.

In the LT-8xxx series, the lighting is controlled va the Gecko in.Mix system.

Web Package

The Web Package is offered as an option and can also be retrofitted at any time. You can conveniently control temperature and filter times while on the go from your smartphone and can be automatically reminded when, for example, the filter needs to be cleaned. Voice assistants such as Google or Alexa can also be connected to the web module (currently only if they are used in English). A special

feature is the remote maintenance function. In the event of a problem, our support can simply go online and issue a remote diagnosis (only if you give us permission to do so).

Salt water disinfection system

Our salt water disinfection system cleans naturally and without chemical additives - water treatment of the luxury class. Pure salt is added once to the water in the jacuzzi when it is filled. Our automatic disinfection system splits up the salt into bromine if necessary. Like chlorine, bromine has a disinfectant effect, but is odourless. This then results in the formation of salt again. A natural and ecological process that is also proven to be environmentally friendly.

Our system offers daily automatic water treatment, which significantly reduces the effort required for maintenance, and at the same time results in soft, skin-friendly water. The water lasts twice as long as with conventional chlorination, and the use of other care products is almost unnecessary. And best of all: this is fully controlled via the control panel located in the pool, which also displays the salt content of the water.

Harvia Vega

Harvia Vega is a modern and user-friendly sauna heater – from the world's largest sauna heater manufacturer. The one made of stainless steel Outer jacket of the Vega is robust and gives your sauna a modern design. The operating switches are ergonomically located at the top of the Placed on the side of the stove and, thanks to its symmetrical shape, can simply select which side the controller is attached to shall be.

Harvia Cilindro

The Harvia Cilindro electric heater is filled with a large number of stones. Thanks to the lattice-like outer shell, each bather can choose the type of steam they want: gentle when the water is poured on the side of the oen, and powerful when the water is poured directly on top of the stone pillar. Cilindro is most impressive in both appearance and experience.

- Contains a generous amount of stones that give off a gentle but powerful heat
- Stainless steel outer surface
- With integrated timer and thermostat

Harvia Cilindro XE

The Harvia Cilindro electric heater is filled with a large number of stones. Thanks to the lattice-like outer shell, each bather can choose the type of steam they want: gentle when the water is poured on the side of the oen, and powerful when the water is poured directly on top of the stone pillar. Cilindro is most impressive in both appearance and experience.

- Contains a generous amount of stones that give off a gentle but powerful heat
- Stainless steel outer surface
- With Xenio Controlpannel

Sauna LT-401 / LT-404

- 6mm ESG glass
- Certified imported hemlock for PEFC
- Far infrared heating box of back plate 300W*2/400W*1/400W*2 Side back
- plate far infrared heating plate 400W*4//400W*4/300W*4 Leg far infrared
- heating box 150W*1/150W*1/300W*1
- Far infrared heating plate of glass platform 150W*1/150W*1/300W Adjustable
- band control system
- Radio CD/MP3 player
- Bluetooth audio connection, including speakers
- Professional color light physiotherapy

LT-6101B : 1100 x1100 x 2000 mm

LT-6102B: 1300*1100*2000 mm

Sauna LT-1110

- 6mm ESG glass
- Certified imported hemlock for PEFC
- External control and internal control sauna furnace (optional) Upper, middle
- and lower infrared heating box 200W/250W/200W
- Adjustable band control system
- Bluetooth audio connection, including speakers Professional color light
- physiotherapy
- Exquisite bucket, wooden spoon, timer (optional)
- High quality Finnish sauna stone

LT-1110 : 1800 x1500 x 2000 mm

Sauna LT-1101

- 6mm ESG glass
- Certified imported hemlock for PEFC
- Far infrared heating box of back plate 300W*2
- Side back plate far infrared heating plate 300W*4
- Leg far infrared heating box 500W*1
- Far infrared heating plate of glass platform 70W*1 Adjustable band
- control system
- Bluetooth audio connection, including speakers Professional color light
- physiotherapy

LT-1101: 1288 x1100 x 2000 mm

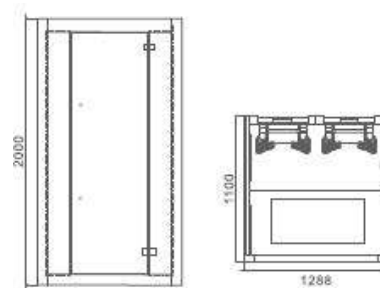

Sanua LT-1603

- 6mm ESG glass
- Certified imported hemlock for PEFC
- Far infrared heating box of back plate 300W*2
- Side back plate far infrared heating plate 300W*4
- Leg far infrared heating box 500W*1
- Far infrared heating plate of glass platform 70W*1 Adjustable band
- control system
- Bluetooth audio connection, including speakers Professional

LT-1603: 1300*1300*2000 mm

TSL-Serie

- Illuminated hydro jets in the side
- Illuminated Hydro jets in the bottom
- Computer-controlled panel for practical and easy use
- The strenght of the side and bottom hydro jets can be controlled separately with the
- control panel Pulse massage
- A quiet pump from LX (sound decoupled from the frame)
- Ozone disinfection system
- Heater from LX at 1.5kW output (with temperature display)
- Colour light with fade function for soft transitions
- Chrome-plated fittings, waterfall, handheld shower
- Bluetooth music system - just stream your favorite music through your smartphone
- Water level sensor offering dry-running protection

E-Serie

- Hydro jets in the side
- Hydro jets in the bottom
- Computer-controlled panel for practical and easy use
- Two Ventui controls to control the massage strength
- A quiet pump from LX (sound decoupled from the
- frame) Ozone disinfection system
- Heater from LX at 1.5kW output (with temperature
- display) Colour light with fade function for soft
- transitions Chrome-plated fittings
- Handheld shower
- Water level sensor offering dry-running protection

GE8120 TSL-W (right version)

- 24 illuminated hydro jets in the sides (4 adjustable turbo jets, 20 massage jets in the foot/back
- area) 16 Illuminated hydro jets in the bottom
- Pulse massage, the strenght of the side and bottom hydro jets can be controlled with the
- control panel Two quiet pumps from LX (sound decoupled from the frame)
- Ozone disinfection system
- Heater from LX at 1.5kW output (with temperature display)
- Colour light with fade function for soft transitions
- Computer-controlled panel for practical and easy use
- Two XXL Waterfall and high quality chrome-plated fittings
- Bluetooth music system - just stream your favorite music through your smartphone
- Water level sensor offering dry-running protection
- Dimensions: 1900 x 1300 x 620mm (length x width x height)

GE8108TSL/GE8108-11TSL /GE8108-2TSL (right version)

- 14 illuminated hydro jets in the sides (4 adjustable turbo jets, 10 massage jets in the foot/back
- area) 8 Illuminated hydro jets in the bottom
- Pulse massage, the strenght of the side and bottom hydro jets can be controlled with the
- control panel A quiet pump from LX (sound decoupled from the frame)
- Ozone disinfection system
- Heater from LX at 1.5kW output (with temperature display)
- Colour light with fade function for soft transitions
- Computer-controlled panel for practical and easy use
- Waterfall and high quality chrome-plated fittings
- Bluetooth music system – just stream your favorite music through your smartphone
- Water level sensor offering dry-running protection
- Dimensions: GE8108TSL: 1900 x 900 x 620mm (length x width x height)
