

## FFM-N2540GBA-500

Acid resistant nanofiltration membrane

<b>PRODUCT</b>	Membrane Chemistry:	Special composite membrane
<b>DESCRIPTION</b>	Nominal retention accuracy:	500 Dalton
	structure:	Spiral coil type
	Choice scope: Diameter:	inlet passage: (31mil), (46mil)
	Application:	Acid recovery, water concentration
	Through liquid pipe material:	CPVC

### Specification Parameter

Removal rate	Water yield	Membrane Area	inlet passage
Glucose、Sucrose /NaCl 95/97	gpd (m³/d) 35	ft² (m²) 17.2(1.6)	mil (mm) 30 (0.8)
Test conditions: 3% glucose, 3% sucrose or 5% NaCl solution, RO water. Test pressure 440 psi (30bar), 86 ° f (30 ° C)			

### OPERATION PARAMETERS

Recommended operating pressure:	220–510 psi (15–35bar)
Maximum operating temperature:	122° F (50°C)
Cleaning temperature range:	95–122° F (35–50°C)
PH range of continuous operation:	0–12
PH range of online cleaning:	0–12
Design pressure drop of single membrane element:	10 psi (0.7 bar)
Design pressure drop of single pressure vessel:	60 psi (4.2bar)

### Conventional treatment fluid:

10%HCl	10%H2S04
15%H3P04	2%HN03
